Road Fabrics, Inc.

PAVING CONTRACTOR:

FPI

AREA INSTALLED:

7,500 sq. yds.

INSTALLATION DATE:

October 2009

MIRAPAVE 500 OVERLAY FABRIC CASE STUDY

The main parking lot at the FAA Control Center in Farmington, MN had developed numerous transverse and longitudinal cracks. The engineering staff at the facility chose Mirafi MPV 500 Paving Mat because of its ability to create a moisture barrier and delay any reflective cracking from appearing through the overlay. The paving mat was installed over a milled surface with a PG 64-22 tack coat at .25 gallons per square yard. A 2" overlay was applied on top.
