Road Fabrics, Inc.

INSTALLED BY:

Road Fabrics, Inc.

PAVING CONTRACTOR:

Asphalt Contractors, Inc.

AREA INSTALLED:

7,135 sq. yds.

INSTALLATION DATE:

June 2010

MIRAPAVE 500 OVERLAY FABRIC CASE STUDY

Homeowners associations and property owners are continuously dealing with maintenance issues of their pavements. One way to help reduce the costs and extend pavement life is to incorporate a fabric interlayer into these pavements. At Lake Camelot in Plymouth, MN they chose MPV 500 to create a moisture barrier as part of their 2010 resurfacing project. Road Fabrics installed the material by first applying a PG-64-22 asphalt cement to the existing milled surface at a rate of .25gal/sq yd. The polypropylene paving fabric was then rolled directly into the liquid asphalt. Following the fabric install, Asphalt Contractors, Inc applied a 1.5" asphalt surface directly over the fabric. They will monitor these roads for reduced reflective cracking.
