

TENSAR TRIAX TX190L GURNEE, IL

Project Profile

Project Name:

Gurnee Park District Employee Lot

Location:

Gurnee Park District

Distributed By:

Road Fabrics Inc

Engineer:

McClure Engineering

Area Installed:

478 SY

Installation Date:

May 2014

The Gurnee Park District was in the process of constructing a new employee parking lot when they ran into poor soils.

The engineer for the Park District called Road Fabrics to consult on a geogrid solution. Once the site was inspected the Park District was faced with two options. They could undercut and remove 12" of the poor soils and backfill with 3" stone or they could incorporate Tensar TriAx® TX190L geogrid into their paving section and skip the undercut and removal.

The TriAx® option was used and saved the Park District \$7,500 in material alone and kept the project on schedule.

The TriAx® Advantage: More owners are selecting TriAx Geogrid to simplify and speed construction, reduce aggregate fill thickness, decrease labor and equipment requirements, reduce over excavation and removal requirements and enable construction to proceed even in difficult working conditions.
