306 sq. yds.

INSTALLATION DATE:

October 2009

GLASGRID PAVEMENT REINFORCEMENT CASE STUDY

Ravinia Drive in Gurnee had developed severe transverse cracking. The engineering staff in Gurnee chose GlasGrid 8502 Pavement Reinforcement system to reduce future cracking. The pavement was milled at the joints and the village staff then placed the GlasGrid on the leveling binder. The GlasGrid was then topped by a 2" surface course.
