

MIRAFI RS580i

Now With Passive Moisture Management

MIRAFI® RS580i, a high-modulus woven geosynthetic, serves as a comprehensive solution for soil reinforcement, confinement, separation, and filtration. Its construction integrates:

- black fibrillated polypropylene yarns for enhanced tensile strength
- orange anti-clogging yarns for filtration benefits
- blue wicking yarns for passive moisture management and an anti-capillary break

The geosynthetic's distinctive profile features an unparalleled ridge-to-valley design, ensuring surface roughness across its entire area. This design facilitates micro-interlocking through friction, fostering excellent interaction between the underlying subgrade and overlying materials.

The following performance properties are intended to establish requirements for quantifying the structural benefit of **MIRAFI RS580i**. As per the recommendations of AASHTO R50-09 *Standard Practice – Geosynthetic Reinforcement of the Aggregate Base Course of Flexible Pavement Structures* and FHWA NHI-07-092 *Geosynthetic Design & Construction Guidelines*, geosynthetic equivalencies should never be based strictly on index properties due to differences in polymers and manufacturing methods. **MIRAFI RS580i** has been fully calibrated in full-scale industry lead design methodologies for flexible pavement designs (AASHTO 93) and unpaved road designs incorporating geosynthetics.

TenCate Geosynthetics Americas (A Solmax Company) is accredited by Geosynthetic Accreditation Institute – Laboratory Accreditation Program ([GAI-LAP](#)). **MIRAFI RS580i** meets Build America, Buy America Act, Pub. L. No. 117-58, div. G §§ 70901-52.

¹ Value Determined from Results of Independent Testing Performed at Kansas State University in accordance with NCHRP Report 512 "Accelerated Pavement Testing: Data Guidelines" and AASHTO R50-09 Geosynthetic Reinforcement of the Aggregate Base Course of Flexible Pavement Structures." Multiplier for Unbound Granular Material; for SG MR between 4.5 and 6.9 ksi (30.9 and 47.4 MPa).

² Value Determined from Results of Independent Testing Performed at GeoTesting Express (GeoComp) "A Laboratory Evaluation of the Performance of TenCate Mirafi® Geosynthetics in Roadway Stabilization Applications – Georgia Silt Subgrade," September 1, 2011. 9-kip {40 kN} Wheel Load, SG CBR = 1%, 12-inch (300-mm) Crushed Aggregate BC (CBR > 25%), 3-inch (75-mm) Rut Depth.

³ Value Determined from Results of Independent Testing Performed at LTRC "Performance of Reinforced-Stabilized Unpaved Test Sections Built Over Native Soft Soil Under Full-Scale Moving Wheel Loads," TRR Volume 2511, 2015. Measured at 0.34-inch (8.64 mm) Rut Depth; Peak Pore Pressure 6-inches (150 mm) Below Geosynthetic.

⁴ Value Determined from Results of Independent Testing Performed at GeoTesting Express (GeoComp) "A Laboratory Evaluation of the Performance of TenCate Mirafi® Geosynthetics in Roadway Stabilization Applications – Montana Clay Subgrade," September 1, 2011. 9-kip (40 kN) Wheel Load, SG CBR = 1.8%, 8-inch (200-mm) Rounded Aggregate BC (CBR > 25%), 3-inch (75-mm) Rut Depth.

⁵ Interaction Coefficient value is for sand (SP) or gravel (GW) based on testing conducted by SGI Testing Services.
