

PETROMAT®

Enviro *The Recyclable Paving Fabric*

PETROMAT® ENVIRO is an innovative paving fabric combining the superior stress absorption and moisture barrier protection as PETROMAT Original with the ability to easily mill and recycle. This patent-pending technology doubles the life performance of a roadway and significantly reduces installation costs.

Primary Functions

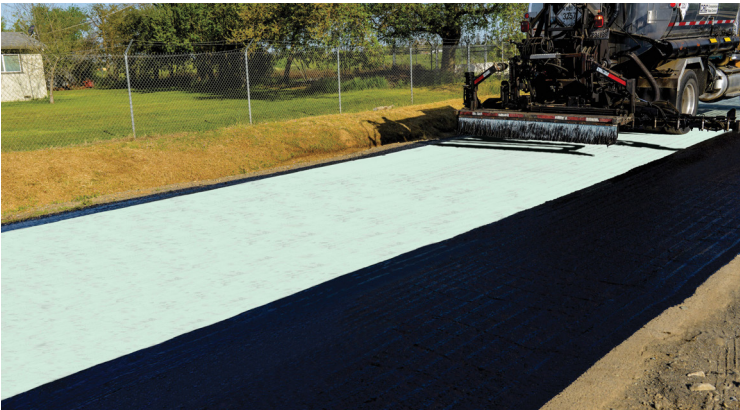

Moisture Barrier Stress Relief

Applications

- Beneath asphalt concrete overlays
- Within new asphalt concrete pavements
- Chip seal surface treatments

RECYCLABLE:

Engineered to be easily milled and recycled into new asphalt concrete.

EASY & EFFICIENT INSTALLATION

- Can be installed on a milled surface without a leveling course, saving \$30,000 per lane mile
- Flexible design allows smooth, wrinkle-free installation even around curves
- Poses no safety hazard or irritation associated with fiberglass-based products
- Reflective fabric provides better visibility during night paving

UNMATCHED PERFORMANCE

- PETROMAT Enviro can be installed directly on a milled surface without a leveling course. This **saves an average of \$4-\$5** per square yard.
- Enviro performs like an additional 1.5" of overlay thickness when saturated with asphalt tack coat, saving \$19,000 per lane mile.
- When saturated with asphalt tack coat, Enviro is 2-3 times thicker than fiberglass-based paving mats, allowing greater stress absorption and efficiency in slowing fatigue and reflective cracking.
- Doubles the life performance of a roadway
- Retains 95% strength during installation, while glass-based products lose up to 60% of strength and tear under construction traffic.
